Dr. Ambreen received her Bachelor of Engineering (B.E.) degree in Materials Engineering from NED University of Engineering and Technology, Pakistan, in 2010. Following her graduation, she briefly served as a Lecturer in the Department of Materials Engineering at NED University. She subsequently completed her Master of Engineering (M.E.) and Doctor of Philosophy (Ph.D.) degrees in Materials Engineering from the same institution in 2013 and 2022, respectively.

Currently, Dr. Ambreen holds the position of Assistant Professor at NED University, where she is actively engaged in teaching undergraduate courses and supervising research projects both undergraduate and postgraduate levels. Her primary research interests include polymer and composite materials, biomaterials, and titanium-based implants. She is also actively involved in research on nano-based coatings and surface modification techniques.

Dr. Ambreen's ongoing research activities are supported by funding from the NED Faculty Young Researchers Program (NEDFYPPSC). In addition to her academic and research responsibilities, she has also contributed to the academic quality assurance process by serving on various Outcome-Based Education (OBE) committees within the university.
